SECURITY AND PEN TESTING

Overview

McKesson Corporation is an American company distributing pharmaceuticals and providing health information technology, medical supplies, and care management tools and products.

Business Need

- Noticeable decline in product, web application and network vulnerabilities
- Centralized vulnerability management practices established
- Secured finished product.
- Analyze System Dependency attacks and Business Model attacks
- Corrupt or missing files, third-party components, etc.
- Input Attacks and Design attacks

Client Situation

- Structured vulnerability management portal or process
- Regular tracking of vulnerability and remediation status
- Dynamic testing plan for regular release
- Unprotected internal APIs, alternate code paths around security checks
- Timely execution of vulnerability remediation as per deadlines

Recommended Solution

- Penetration tests to determine web application and network vulnerabilities.
- Code Review to detect, validate and remediate vulnerabilities directly with development team
- Defined risk rating
- Centralized dashboard to manage vulnerabilities and central task force team for entire activity management
- Periodic and regular reports
- SQL injections, buffer overruns, etc.

Results

- Faulty process validation
- SQL Injections, buffer overruns
- Detect and arrange threats
- Meet monitoring necessities and evade penalties though Pen testing
- Knew Authentication attacks
- Automatic Scanning

Technologies

• Nmap • Wireshark • ZAP • Wapiti • W3af • Aircrack
